

SCENARIOS TO USE EACH LIGHTING DISTRIBUTORS

Decor offers four types of distributors. Your application will determine which distributor to use. When you require a dimmable driver, then you will need the 6-way bare (LT-DIST-6WAY-BARE), which has 6 light ports and will be hard wired to the dimmable driver. If you need extra light ports, then use the 6-way (LT-DIST-6WAY) as this will add 5 light ports to another distributor. The most common distributor will be the 6-way with switch (LT-DIST-6WAY-SWITCH) as it connects to the constant driver either directly or through an extension lead. You can also connect multiple 6-way with switch together. This distributor has 6 light ports and a switch port to connect cabinet switches. Note the switch port only controls the 6 light ports on the distributor. To control your lights from your smart phone via an app, then use the 6-way with switch app (LT-DIST-6WAY-SWITCH-APP). It has the same functions as the 6-way with switch, but also the ability to control lights in different groupings via the Hafele Connect Mesh App on your smart phone.

SCENARIO 1: LT-DIST-6WAY-BARE

When a dimmable driver is ordered, then Decor supplies the 6-way bare. This distributor has 6 light ports and will be hard wired to the dimmable driver.

SCENARIO 2: LT-DIST-6WAY

When you need to add extra light ports, then use the LT-DIST-6WAY as this will add 5 light ports to another distributor. You can add this to any of the four distributors.

SCENARIOS TO USE EACH LIGHTING DISTRIBUTORS

SCENARIO 3: LT-DIST-6WAY-SWITCH

This is the most common distributor as it connects to the constant driver either directly or through an extension lead. This distributor has 6 light ports and a switch port to connect cabinet switches. The switch port only controls the 6 light ports on the side of the distributor. You can connect multiple 6-way with switch together or 6way-switch-app via the single light port on the end. This single light port will have constant power and so it is not recommended to connect a light using this port.

SCENARIO 4: LT-DIST-6WAY-SWITCH-APP

If you would like to control your lights from your smart phone via an app, then use the 6-way with switch app. It has the same functions as the 6-way with switch, but also the ability to control lights in different groupings via the Hafele Connect Mesh App on your smart phone.

HOW-TO USE THE APP:
