

SILICONE FOR INSTALLERS

There are many different silicones for different applications and variations of colors. Silicone products are always changing so this is not any sort of all-inclusive list. Silicone manufacturers are continually changing their products each year so because they worked in the past doesn't mean they will work in the future. I would strongly suggest to all installers to test their silicones on finished cut off scraps of moldings, fillers, or toe kicks or any finished cut off prior to applying it in the kitchen or bath on any finished surface area that will require silicone. If there will be any reaction it will typically occur within 24 hours which is the cure time for many silicones.

Brand	Name	Application Type	Color	Results	Pass/Fail ✓ X
NuFlex	302	Kitchen & Bath	Clear/Translucent	No Reaction	✓
General Electric	Silicone 1	Kitchen & Bath	Clear	No Reaction	✓
Home Builder	Silicone	Kitchen & Bath	Clear	No Reaction	✓
CSL	Silicone	Kitchen & Bath	Clear	No Reaction	✓
DAP	Silicone	Kitchen & Bath	Clear/Translucent/White	Turned Pinkish/Red	X
DOW	Silicone	Kitchen & Bath	Clear/Translucent	Turned Pinkish/Red	X
General Electric	Silicone II	Kitchen & Bath	Clear	Turned Yellowy/Green	X
