

PREP WORK

THINGS TO DO BEFORE CABINETS ARRIVE

- Make sure all wall switches and plugs are in the correct location.
- If using a dimmable driver that is not close to cabinets:
 - Did an electrician wire the low voltage wire from the dimmable driver to the location of the bare 6-way distributor?
- Run extension leads behind drywall to the proper locations

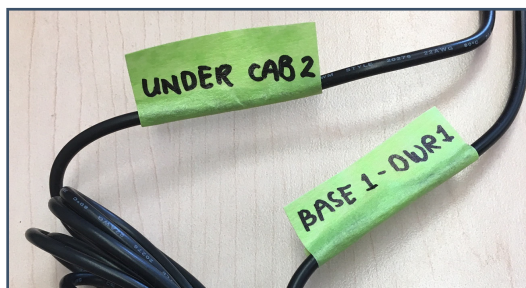

[Video: Things To Do Before Cabinets Arrive](#)

Route the back of the cabinets so you can run wires and the cabinet box is flush against wall.

Label and Zip Tie the Wires

Tape loose wires
